Ali Cheema

Software Engineer | DevOps Engineer | Cloud & Automation | Problem Solver | Freelance Tech Professional
Pakistan

Summary

I'm a Software Engineering student focused on turning logic into clean, scalable solutions.

I work with Python and C++ and build responsive interfaces using HTML and CSS. My interests include problem-solving, logical system design, software testing, and performance-aware development. I focus on writing efficient, readable code and understanding why systems work, not just how.

What defines me is consistency, curiosity, and a strong learning mindset. I adapt quickly, think analytically, and enjoy tackling complex problems in structured ways.

Alongside development, I explore graphic design and creative thinking, which helps me create solutions that are both functional and intuitive.

I'm currently open to internships, freelance projects, learning opportunities, and remote roles, where I can contribute, grow, and create real impact through technology.

Education

KIPS Education System
Intermediate in Computer Science, Computer Software Engineering · (August 2022 - June 2024)

University of Management and Technology - UMT
Bachelor of Science in Software Engineering, Computer Software Engineering · (2024)
